This is the glossary that accompanies the document ‘Towards a vision for implementation of rich, interoperable dataset documentation’.

Terms

- **Collection management system (CMS):** stores metadata about the datasets and allows them to be managed, for example MAIS-Flexis, Atlantis
- **Dataset:** A collection of data and/or metadata that is collectively described and published
- **Dataset documentation:** provides users with information about a dataset, such as its title, date of creation, legal framework for use
- **Dataset contextualisation:** the process of piecing together the context of a dataset (e.g. where it comes from, how it was created and by who) and recording this context in rich dataset documentation
- **Rich dataset documentation:** provides dataset users with the information about the content of the dataset, its context of production and its (permitted)

uses that they require in order to find, assess and reuse datasets in a responsible manner. Rich dataset documentation is designed to be interoperable, both across different SSH fields and across the different CMSs in use in those fields.

- **Dataset documentation template:** specifies which information can be included in the dataset documentation, whether this information is required or optional, and in what form the information must be filled in (e.g. text, date, vocabulary term). It may also specify vocabularies and provide documentation and examples.
- **Datasheet for digital cultural heritage:** A template for dataset documentation that is developed and updated by a dedicated Europeana Working Group. Example of dataset documentation for cultural heritage data: <https://pro.europeana.eu/project/datasheets-for-digital-cultural-heritage-working-group>
- **Data-envelope:** A template for dataset documentation that is developed and tested by Huygens Institute, originally focusing on historical datasets. Example of dataset documentation for cultural heritage data: <https://knaw-huc.github.io/data-envelopes/>
- **Datahub or hub:** collects dataset descriptions, and optionally also datasets, from various data providers and presents these on a digital platform to make them findable. This may be a repository or a metadata aggregator.
- **Documentation editor:** tool that allows dataset documentation to be created, edited, saved and exported. This can be a simple generic text editor such as Microsoft Word, Google Documents or Notepad. Specialised documentation editors include: the [Huygens data-envelope editor](#), the [Open Datasheets editor](#), and the editor [SideDoc](#) developed within the [SSHOC-NL](#) project for use with both Datasheets for DCH and Data-envelope templates.
- **Metadata aggregator:** stores the relevant parts of the dataset description to make the dataset searchable, e.g. Europeana, NDE Dataset Registry, CLARIAH INEO
- **Repositories or deposit platforms:** stores the dataset and its description to ensure long-term access, e.g. DANS Data Station

Actors

- Cultural heritage organisation (e.g. library, archive, museum)
- Research institution (e.g. university, institute, research centre)
- Network Associations (e.g. NDE)
- Infrastructure provider (e.g. registry, repository)
- Researcher
- Member of general public without academic affiliation

- Private company

Roles

- **Community liaison:** investigates and advises on the needs of users in a specific community
- **Data provider:** provides access to datasets to dataset users
- **Data manager:** responsible for overseeing and regulating data processing, data deposit and access to data within the organisation. In the context of a cultural heritage institution this could be the collection manager.
- **Data-envelope author:** creates and/or fills in a data-envelope for a dataset
- **Data-envelope modeller:** maintains and adapts the data-envelope template
- **Data-envelope reviewer/quality controller:** reviews the content of a data-envelope for a dataset and checks its correctness and quality
- **Data ethics expert:** advises on how data ethics aspects in datasets should be addressed in the documentation
- **Dataset user:** a human being who works with a dataset. These may be researchers, journalists, educators, creatives, developers or other members of the public. They may be aided by software that uses the machine-readability of dataset documentation to help the user in searching, filtering and analysing/aggregating the documentation.
- **Developer:** develops software for infrastructure or tools
- **Domain expert:** advises about the terminology and data practices of a particular domain
- **Legal expert:** advises about legal aspects of datasets
- **Project manager:** manages a project that produces a dataset
- **Supervisor:** supervises a data-envelope author and takes decision on data-envelope/rich documentation publication

Abbreviations and projects names

- **API** (Application Programming Interface) that allows different software applications to communicate and exchange data
- **NDE** (Netwerk Digitaal Erfgoed) is a network of organisations as well as other partners within the GLAM sector in The Netherlands who strive to make collections more accessible to the wider audiences
- **NDE Dataset Register** is a catalogue of cultural heritage datasets that is supported by NDE
- **FAIR** (Findable Accessible Interoperable Reusable) is the guiding set of principles for scientific data management and stewardship, see <https://www.go-fair.org/fair-principles/>

- **SSHOC-NL** is a project to build and develop digital infrastructure for Social Sciences and Humanities, see <https://sshoc.nl/>
- **Europeana dataspace** is a flagship initiative on the European Union level to enable the sharing and reuse of cultural heritage data, see <https://www.dataspace-culturalheritage.eu/en>
- **CoreTrustSeal** is the certification system for data repositories, see <https://www.coretrustseal.org/>
- **OAIS** (Open Archival Information System) is a reference model standard in digital preservation, see <http://www.oais.info/>

Organisations

- **City Archives of Amsterdam** - <https://www.amsterdam.nl/>
- **CLARIAH-NL** - <https://clariah.nl/>
- **DANS** - <https://dans.knaw.nl/en/>
- **E-RIHS.nl** - <https://e-rihs.nl/>
- **Europeana** - <https://www.europeana.eu/>
- **Huygens Institute for Dutch History and Culture** - <https://www.huygens.knaw.nl>
- **Netherlands Institute for Sound & Vision** - <https://www.beeldengeluid.nl>
